

FIELDVIEW Automation Course 2 days

Price 1.500 Euro

Pre requisite: FIELDVIEW Introductory Course + Some experience of FIELDVIEW needed.

In a CFD environment where transient data and large data sets make the post processing time-consuming, the need for automation is easy to see.

Also the need for creating accurate similar pictures on a different variety of calculations requires you to do the same steps over and over again. This is both time consuming and tedious.

This course in FIELDVIEW automation aims to give control over the tools available for automation like restarts, scripts, FVX and Unix/Linux scripting. The course will make you more efficient and take the next step in efficient post processing.
